Idea Brainstorming

Core idea

A single multimodal food intelligence agent instead of five separate apps.

Why multimodal

- Image alone can confuse similar dishes, so voice or text context ("what is this?", a dish name, a goal) improves accuracy.
- Voice input (speech transcription) allows hands-free use.

Feature ideas considered

Idea	Module
Identify dish and estimate nutrition from a photo	Food Recognition
Show confidence and a calorie range, not a single number	Food Recognition
Flag spoiled food before eating	Freshness Detector
Hygiene checklist with a hygiene score	Hygiene Monitor
Track kitchen items with expiry dates and get recipes	Smart Kitchen
Meal plan that respects allergies and medical conditions	Meal Planner
Reject non-food images	Food Recognition

Constraints

- Runs locally (Ollama with Llama) so user health data does not need to leave the machine.
- Estimates only: portion size and hidden ingredients affect real values.

Selected idea

FoodVerse AI with the five modules above.
