API Design

Routers registered in `backend/main.py`: voice, recipe, meal_ai, plus the recognition, freshness, hygiene and smart-kitchen endpoints.

Module	Backend file	Method and path	Input	Output
Food recognition	`main.py`	TODO	image file, optional text/voice	dish, confidence, serving_g, calories_kcal, calorie range, protein_g, carbs_g, fat_g, health score
Freshness	`freshness.py`	TODO	image	freshness result
Hygiene	`hygiene.py`	TODO	image or video	findings
Smart Kitchen	`smart_kitchen.py`, `recipe.py`	TODO	dish or ingredients	recipe steps
Voice	`voice.py`	TODO	audio	transcript
Meal Planner	`meal_ai.py`	TODO	profile fields	meal plan

TODO: fill the paths from your code. You can see them at http://localhost:8000/docs while the backend is running.
