System Architecture

```
User (browser)
   |
   v
React frontend (localhost:5173)
   |  HTTP
   v
FastAPI backend
   |-- Food recognition model (PyTorch) --> Nutrition lookup
   |-- Freshness module
   |-- Hygiene module
   |-- Smart Kitchen / Recipe
   |-- Voice module
   '-- Meal Planner --> Ollama + Llama
```

Components

Component	Location
React pages and components	`frontend/src/pages`, `frontend/src/components`, API calls in `frontend/src/api.js`
App entry, CORS, routers	`backend/main.py`
Freshness	`backend/freshness.py`
Hygiene	`backend/hygiene.py`
Nutrition	`backend/nutrition.py`
Recipe / Smart Kitchen	`backend/recipe.py`, `backend/smart_kitchen.py`
Voice	`backend/voice.py`
Meal planning	`backend/meal_ai.py`, `backend/meal_planner.py`
Models	`models/`

Design decisions

- Separate router per module so each can be developed and tested alone.
- CORS limited to localhost origins during development.
- LLM runs locally through Ollama.
