Test Results

Check	Result
Overall model accuracy on validation set	TODO
Accuracy on own images	TODO
Best confidence threshold (from threshold sweep)	TODO
API tests passed	TODO
Bugs found and fixed	TODO

Known issues

- Dishes missing from the training classes are mapped to the closest known dish (for example biryani shown as fried rice) until the model is fine-tuned on them.
- Calorie values are estimates. Portion size and hidden ingredients affect real values.
